OF THE

COMMISSIONER OF PATENTS

FOR

THE YEAR 1893.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1894.

REPORT
OF THE
COMMISSIONER OF PATENTS
TO CONGRESS,
FOR THE YEAR ENDING DECEMBER 31, 1893.

Laid before the Senate by the Vice-President March 22, 1894, referred to the Committee on Patents, and ordered to be printed.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,

Washington, D. C., January 31, 1894.

*To the Senate and House of Representatives of the
United States of America in Congress assembled:*

I have the honor to submit the following report of the business of this Office for the year ending December 31, 1893.

In 1893 there were received 37,293 applications for patents; 1,060 applications for designs; 120 applications for reissues; 2,247 caveats; 1,899 applications for trade-marks; and 401 applications for labels. There were 23,670 patents granted, including designs; 99 patents were reissued; and 1,677 trade-marks were registered. The number of patents which expired was 14,172. The number of patents which were by operation of law forfeited for non-payment of the final fees, was 4,102. The total expenditures were \$1,141,038.54; the receipts over expenditures were \$101,833.19, and the total receipts over expenditures to the credit of the Patent Office in the Treasury of the United States amounts to \$4,281,743.45.

At the beginning of the year the arrears of work amounted to 9,127 applications awaiting action, and one division was between seven and eight months behind. On the 2d of May the number reached 10,428. This number has been reduced so that at the close of the year there were on hand 6,261 applications—a reduction since May of 4,167 cases—and only one division was in arrears four months. Four divisions had the work so well in hand that an application would be reached for its first action within one month from the filing date; fifteen divisions were within two months; seven within three months, and six divisions were within four months of date.

Fuller details are given in the tables forming a part of this report.

In compliance with the requirements of the law, to lay before the Congress such information, in addition to the statistical tables, as will be useful, the national creed in material things will be taken to be that no imperfect welcome is accorded to mechanical inventions, that the race retains the power of great conceptions, that the world's inventive fertility will not ebb, that our industry will not become less and less originative, and that the recent international comparison of useful things has stimulated the creative thought, as it has trained the eyes and hands, of the people. There is accordingly reason to believe that an era of still greater constructive power, of keener speculative insight, will follow with its train of notable inventions. The national character is favorable. A foreign observer remarked, "The intuitive feeling in England is that if an invention were really valuable, it would have been hit upon before; the feeling in

America, that whatever is new ought, simply because it is new, to have a trial."

The American patent system has been developed to higher perfection than that of any other country in the world. The patents granted under it, up to January 1, 1894, number 521,700, while those granted in all other countries combined aggregate 817,362.

All the recent criticisms upon the patent system fall naturally into four classes:

First. Those which complain of the inconsiderate grant of invalid patents;

Second. Those which complain that the courts do not sustain whatever patents are granted, thus, as the criticism goes, discrediting the seal of the United States;

Third. That those to profit by the patent system are not the inventors, but the large business concerns, which by their mere size, and the capital employed, have monopolistic tendencies; and

Fourth. That when a valuable patent is granted, the public may be and sometimes is excluded from the use of the invention on any terms, and so some say that a compulsory license system on equal terms to all ought to be ingrafted upon the patent system.

The second and fourth criticisms concern the fate and effect of patents after they have left the Patent Office, and therefore belong to the larger question of the policy of the Republic toward inventions rather than to that more restricted domain wherein the Commissioner is required by law to give information of his Department to the Congress.

The third criticism likewise is of the same class, but in addition it implies that the government might transact with inventors with paternalism, so as to protect them from their own improvident bargains about their inventions. But as the modern state governs as little as possible, in order to leave the widest sphere to energy and enterprise, this can hardly be called a useful regress. I shall dismiss this also, and shall deal most fully with the first.

Doubtless the patent system may be regarded as less dependent on illusions and resting upon as firm and adequate foundations as any conceivable function of government. It has nurtured this country in its growth and is calculated to sustain it in its maturity. It is enduring and great, and so it may dare to disclose its deficiencies most fully; feasible solutions for all its problems may be found, once they are clearly stated.

All valid criticisms of an administrative kind connect themselves with the inadequate room, the inadequate force, the inadequate equipment of the office.

CLASSIFICATION DIVISION.

A Classification Division is required and should be established for the purpose of systematizing all the

material in which the history of invention is written, so that it would be readily accessible to searchers upon the novelty of any alleged invention. An outline of the procedure within the Office upon the application of an inventor will illustrate this. In considering the merits of an application for patent the first question to be determined is whether the alleged invention is new—that is, whether it is to be found in any of the 521,700 American patents or in any of the 817,362 foreign patents, or in any book, periodical, pamphlet, or paper, in any language, of this or any other country. The search is made by the Assistant Examiners. If a controlling or pertinent reference exists and is not found, the patent issued upon this application would be void, if contested. And herein lie the fruitful beginnings of all error. The references once found, a mistaken decision on the question of invention is not difficult of correction. Two appeals are provided within the Office and one to the courts, and the remedy by bill in equity is also open to applicants. But the search upon which the whole contention is based is usually made, once for all, at the outset, and it is here that the administrative side of the system may be greatly strengthened.

A study of eighty-one patent cases, recently before the courts, wherein the claims were held to be invalid, discloses that in twenty-six there was no evidence that the references before the court, in view of which the patents were found to be invalid, were ever cited by this Office; in twenty-nine some, but not all, of the references were cited, and only in the remaining twenty-six were the same references before the Office as were before the court.

Of 988 court cases reported in the OFFICIAL GAZETTE between 1886 and 1892, wherein patents were in litigation, 436 patents were sustained and 552 were declared invalid in whole or in part. Of the number declared invalid, 428 were by reason of some fault in the Office, and 124 on account of evidence brought to light of which the Office had no knowledge before granting the patents.

These figures do not furnish the basis for a general estimate of the proportion of patents granted, which, if contested, would be declared void, for all those in which there is general acquiescence in their validity and which consequently never are contested in courts must be reckoned upon the side of the proper actions of the Office. Candor compels the admission, however, that an indefinite number of patents are never contested, because out of weakness they are never insisted upon in court as valid.

Approaching the subject from another side, I am furnished with the result of examinations as to the validity of the claims in ten patents, taken at random, where searches in this Office were made by a well-known law firm. These patents contain fifty claims, of which thirty-five were considered and were reported to be old. In justice to the Office it must be said that the time given to such search by the attorneys was about one week to each patent, and their charge for making it ranged from one hundred to one thousand dollars, whereas each of the thirty-two divisions in this Office averages five searches for every

working day in the year, and at a cost of but fifteen dollars to the inventor.

This proposed classification division is the difference between the patent system, capable of being administered with beneficence and tending in all respects to the common good, and the same system encroaching upon the domain of common knowledge by reason of the deficiencies in its own equipment. A patent for a new thing adds to the common stock of knowledge; a patent for an old thing takes something away from what the public already enjoys. Against every application, therefore, must be opposed the whole prior art. Each of the thirty-two examining divisions contains on the average more than sixteen thousand domestic patents and a still larger number of foreign patents. These are now defectively and insufficiently classified in divisions and subdivisions, according to the uses to which the inventions are to be put. The kindred inventions of similar construction and of like operation in other arts and even in other subdivisions are not before the Examiner, excepting as he may remember them or guess where they may be found. Yet, all such as anticipate an application before the Examiner must be found, or else the grant of a patent will be void; and when found, all such must be critically and judicially examined, or the same disastrous consequences follow, and this examination of applications must be done promptly, for delay is often as great an evil as no action at all.

When it is considered that these are judicial decisions involving large interests, upon which the growth of the arts as well as private rights are dependent, it will be seen that the searching classification of all existing grants and other material is the only condition upon which the work may be done at all.

The proposed Classification Division calls for forty-four skilled Examiners and eight clerks and assistants, the salaries of whom would aggregate \$64,590 a year, as follows:

1 Chief of classification division.....	\$2,750
2 First assistant examiners (each).....	1,800
2 Second assistant examiners (each).....	1,600
3 Third assistant examiners (each).....	1,400
36 Fourth assistant examiners (each).....	1,200
4 Clerks (each).....	1,200
2 Permanent clerks (each).....	1,000
2 Copyists (each).....	900
2 Assistant messengers (each).....	720

Thirty-two of the thirty-six Fourth Assistant Examiners recommended would be assigned to work in the existing examining divisions, and as a part of their work would have charge of both the permanent and current division classification, as well as of their assigned part of the work as a whole in the new division to be established. This contemplates the fundamental and philosophical classification, based upon mode of operation and structure, of all domestic and foreign patents and of the entire mass of printed publications, these constituting the prior art or the field of search.

SCIENTIFIC LIBRARY.

The entire category of granted patents is yet but a part of the material to be classified; but that material is in the possession of the Office, or such parts as are lacking may be obtained by the courtesy of other nations and in exchange for copies of our own patents.

The scientific library of sixty-five thousand volumes

of technical books presents a deficiency of another kind. While well classified, so far as the subject-matter is concerned, it lacks more than three thousand two hundred necessary books, estimated to cost about \$10,000. Prior to 1885 \$5,000 was annually appropriated for the library; from 1885 to 1892, \$3,000; in 1893, \$2,500; and for the current year, \$2,000; and out of this altogether inadequate sum we must pay between four and five hundred dollars for the expense incident to transporting our publications and patents to foreign governments. The result is that the library today falls short of its necessary equipment. The Congress has enacted that if an invention is described in any printed book, in any language in Christendom, published before the date of an applicant's invention, a patent thereon will be void if granted; thus our most solemn acts depend for validity upon knowing books that we do not possess. It is thought that the requirement laid upon this Office by the Congress to know the contents of certain books is equally an obligation that the Congress should give this Office those books.

I respectfully recommend, therefore, an appropriation of \$10,000 for the scientific library, instead of \$2,000, and an appropriation of \$64,590 for the classification division. These two being added to the equipment of the Office will lay the errors in granting duplicate or invalid patents at the door of the judicial officers of the system, and they are alike and equally the necessary equipment of the Office in such sense that without them the reasonably fair administration of the law cannot be attained.

I refer to the report of the librarian, hereto appended, for a detailed statement of the resources and needs of the scientific library.

CASES WITHDRAWN FROM ISSUE.

Three Primary Examiners recently resigned. Their successors were instructed to re-examine the cases which had been passed to issue in their divisions, but which had not yet gone to patent. As the result of that investigation I was advised that in one hundred and fifty pending cases the applications should be withdrawn from issue, upon the ground that patents therein would be void, and they were withdrawn.

This action opened these cases for further consideration upon the merits, to be followed by an allowance or a final rejection by the Primary Examiner, according to law, with the right of successive appeals to the Board of Examiners-in-Chief, the Commissioner, and the United States Circuit Court of Appeals for the District of Columbia.

Errors are inevitable in the most perfect system, but the fact that one hundred and fifty applications were erroneously passed to issue, which were in fact met by references in the possession of the Office, furnishes a further reason for the comprehensive classification of all the patents and publications upon which the validity of new patents must depend.

But after all deductions are made, the intelligent scrutiny given to the vast mass of material presented, the rapidity and thoroughness of the search through the prior art made under inadequate and forbidding conditions, have earned for the examining corps of

the Patent Office the high encomiums of the most discriminating observers, and justify this claim made in their behalf, that the resources of the Office should be expanded to meet their needs.

PHOTOGRAPHS OF DRAWINGS.

The Office will make photographs of the drawings in those cases where changes in the drawings are required or permitted, and will in such cases make such photographs a part of the files, to the end that a perfect record may be preserved of the original application, through all changes that may follow. This will also be a safeguard against unauthorized changes.

RULE 64.

By a recent amendment to Rule 64 the Office gives precedence from the outset to actions upon the merits of applications and postpones requirements in mere matters of form until after patentable subject-matter has been found.

DIVISION OF APPLICATIONS.

The division of applications is not required upon the basis of Office classification, but only when an applicant attempts to put two or more distinct inventions into one application, and the patent for that reason would be void.

CONTRACTS.

The contract for the reproduction of drawings of the weekly issues of patents, for producing copies of designs, trade-marks, and pending applications, for the reproduction of exhausted copies of drawings and specifications, and for photolithographing or otherwise producing plates for the OFFICIAL GAZETTE, was awarded to the National Lithographing Company, although a new company, for the year beginning July 1, 1893, upon its competitive bid for such work, in which it was the lowest bidder, while the bid of the old company exceeded the reduced appropriation by over four thousand dollars, upon the estimated work of the year. In the beginning expected delays occurred, and for the first three or four issues of the OFFICIAL GAZETTE some falling off in the quality of the work was observed, but subsequently the arrears were recovered, and the quality of the work fully sustained.

It was considered that administrative reasons made it desirable that the work should be taken away from the contractor formerly doing it and given to another, with whatever attendant inconvenience to the office or to the public might temporarily result from the change.

EXPIRED PATENTS.

It is considered that it would be a distinct benefit to the public to reproduce from week to week in the OFFICIAL GAZETTE all patents as their terms expire, thus throwing open to the world full information respecting inventions which become free. There were fewer subscribers to the GAZETTE seventeen years ago. By this republication the present subscribers are furnished, without any additional expense, with the patents published in the early years of the GAZETTE. Aside from this consideration, many of the issues in the various years are exhausted. From January to June, 1880, from January, 1881, to June, 1882, and from April to June, 1884, all numbers are exhausted. Orders are not infrequent for complete sets of this

publication, which the office is unable to fill. It has been the practice for some time with one of the principal foreign patent offices to republish expired patents.

SALE OF COPIES OF PATENTS.

Under section 493 of the Revised Statutes the Commissioner is authorized to fix the price of printed uncertified copies of patents at from ten to fifty cents each. It is fixed at ten cents, but this legal minimum would appear to be too large. The Office now has on hand from one hundred to one hundred and fifty printed copies of all patents, except twenty-three thousand one hundred and twenty-six of those issued in 1861 and earlier. Some classes have been completed by the publication of all patents ever issued; sewing-machines and mowing-machines are among those which have been so completed. Prior to March 3, 1891, the charge for an uncertified printed copy was twenty-five cents. In the aggregate the Office has on hand by estimation more than fifty million copies of patents, most of which will never be sold at the present price. Certain manufacturers, law firms, and other patrons of the Office have standing orders for all patents in certain classes as issued. This is a heavy tax. In Class 105, railway-cars, there are 15,000 patents; in Class 56, harvesters, there are 10,000 patents; in Class 111, seeders and planters, there are 8,000 patents. These at the present rates would cost, respectively, \$1,500, \$1,000, and \$800.

These copies might be sold with much advantage by classes at five cents each, and in classes of a thousand or more at three cents, without exhausting the stock on hand, except in occasional instances, and where they are exhausted or likely to be, reprints may be made and the sales continue indefinitely.

Apart from the large increase in the receipts, this mass of material is so great in bulk as to overtax the storage capacity of this Office. Since some copies of every patent must be printed, and since the cost of printing the one hundred copies thus stored is only nominally greater, and since the patrons of the Office do not now take them in large quantities at the price now asked, but would take them at a less price, it is recommended that section 493 be amended so as to remove the minimum limit at which the Commissioner is now authorized to sell these copies, and to authorize him, with the approval of the Secretary of the Interior, to provide by rule for their sale at such price as he may deem reasonable, without any minimum limit.

INTERFERENCE CASES.

Congress by act of February 9, 1893, provided that appeals may be taken from the decisions of the Commissioner, in interference cases, to the United States Circuit Court of Appeals for the District of Columbia. The Examiner of Interferences in the first instance decides these cases, before whom they are argued at length upon printed records and upon briefs wherein the labor of counsel and the expense of litigants are oftentimes as great as in infringement cases in the circuit courts of the United States. From this decision an appeal lies to the Board of Examiners-in-Chief, and from their decision in turn an appeal lies to the Commissioner, and now from his decision a third appeal lies to the United States Circuit Court of

Appeals. It is thought that with the additional appeal to court, one decision within the Office might be dispensed with, and it is therefore recommended that such changes in the law be made that interference cases will be disposed of as follows:

The Examiner of Interferences shall superintend the preparation of the record and prepare a brief summary of it; he shall transmit the record and the summary to the Board of Examiners-in-Chief for their decision, from which appeals will lie, as now, to the Commissioner and from him to the court.

The printing of interference records is a heavy burden upon the parties, and with the appeal to the court now provided, the record must be reprinted at a double expense. When the record, as now privately printed, comes to be examined for the purpose of furnishing the court of appeals with certified copies, it is found that it is often defective. It is doubtful also whether the Office has authority to certify copies of the record furnished by the parties, although verified by the Office, except at the prescribed charge of ten cents a hundred words.

It is recommended that the Office be given authority to print the record in interference cases, through the Public Printer, upon the deposit of the estimated cost; that twenty-five copies in each case be printed, and that upon appeals the parties may have certified copies of this record at a nominal sum, so that is no case will a reprinting of the record be required, and that, on the other hand, the Office, having superintended the printing of the record in the first instance, may have no additional labor by reason of the requirement for certified copies in later proceedings.

PATENT BAR.

The vast public and private interests involved in the just administration of the patent system demand that the practitioners before the Office, like those before the Federal courts, shall be only those of ascertained moral and intellectual fitness. To this end it is respectfully recommended that legislation be had establishing a patent bar, which shall consist, in the first instance, of those counselors-at-law who are entitled to practice in the Federal courts, and that the Commissioner of Patents, with the approval of the Secretary of the Interior, may establish rules and regulations for the admission, from time to time, of those found qualified, and who may be recommended for admission by the Federal bar of the State in which they reside, or in the manner and by those on whose recommendation admissions to the State bar are made by the State courts where the applicant may reside. It is believed that under the guidance of a patent bar of recognized standing and repute, the soliciting of patents would attain a regularity and dignity in the practice of the profession of the law which is otherwise unattainable, and that the first to gain under such a practice would be the meritorious inventors, and second only to them, the industrial world and the public.

SECTION 4887.

It is estimated that about one-tenth of the inventions covered by American patents in recent years are also patented in foreign countries. Section 4887 provides that—

* * * every patent granted for an invention which has been previously patented in a foreign country shall be so limited as to expire at the same time with the foreign patent, or, if there be more than one, at the same time with the one having the shortest term, and in no case shall it be in force more than seventeen years.

Those coming under the operation of this statute are in large part American citizens, and thus what was intended as a limitation upon foreigners in this country bears most heavily upon Americans in their own country. But the remedy is easy of application, should Congress see fit to apply it.

It is recommended that the last sentence of section 4887, the part above quoted, be repealed. Following this, it should be provided that application may be made in this country within six months from the date of application in any foreign country, without prejudice or loss of rights on account of the time of application, with the addition, in the language of the International Convention, of one month for countries beyond seas. This would make the American patent independent of the term of foreign patents and of the exigencies dependent upon procedure in the Patent Office of this or any foreign country.

These suggestions appear to be in line with the objects of the International Convention, which will be likely to secure in time two things: first, international agreement upon the term of all patents, and consequent uniformity in that respect, and, second, a period—say six months, or seven months for countries beyond seas—within which application may be made in the Patent Office of any country without regard to procedure in any other country and without harmful effect upon the term of the patent.

REMOVAL OF MODELS.

In July last 80,000 of the 154,900 models forming part of the record in patented cases were removed from this building to the Union Building in this city, rented from private owners, in order that the space thus vacated might be utilized to meet the urgent demand for additional room to accommodate the working force of the General Land Office and the Patent Office. The advantage thus gained in room is to a considerable extent offset by the inconvenience to the Examiners who have need to inspect these models in their daily work. I quote from the report of Mr. Commissioner Mitchell made to Congress in 1890:

The models contained in the model halls are not only of great interest to the public at large, who evince their interest by visiting them daily in large numbers, but they are of almost inestimable advantage to the Examiners by enabling them to conduct their investigations expeditiously. A considerable per cent. of the applications for patents received from day to day are found to be met and anticipated by the contents of the model cases. I regard it as nothing less than a public calamity that the Office was several years ago compelled to suspend the reception of models, excepting in special instances, for want of space in which to store and exhibit them. A public gallery containing specimens of all the inventions of the past ten years would furnish an exhibition of industrial growth of marvelous interest and value, and would be of vast assistance to inventors and Examiners in enabling them to readily ascertain whether inventions for which protection is sought have been patented previously. I venture to express the hope that the time will come when models will again be required in connection with all applications, and that when that time arrives an effort will also be put forth to obtain specimens of the more important inventions which have been patented during the intervening period.

I recommend Congress to make some provision which will enable the Department to return these models to the galleries in this building, designed and constructed for their exhibition.

WORLD'S FAIR.

The Patent Office Exhibit at the World's Fair, con-

sisting of 2,172 official models and 290 models furnished by private interests, together exhibiting the historical development of the most important arts, has, so far as possible, been preserved intact and many of the owners of unofficial models which were incorporated in the exhibit have presented them to the Patent Office. The exhibit is now installed in the corridor of the south model hall. A cordial acknowledgment is made to those who have contributed to it.

The World's Exposition at Chicago set forth objectively and by comparison with the achievements of other nations the result of the encouragement given to invention and discovery by the patent system. No statistics are available showing what exhibits are the direct offspring of the system, and what are more remotely the product of its methods, but it may be said that product, means, and methods were merely the tangible evidence of an unseen world of invention and discovery, which was brought into being by inventors, the fraternity of great thinkers, working under this stimulus.

The system has its historical relations with that of England, but in its present development it is distinctively American, in that exclusive rights for a limited time are given, not to claimants as a matter of course when applying in due form, but only upon a discriminating search. This distinctive feature has recently received the compliment of imitation from more than one foreign power.

It is agreed by all observers that the patent system and the exposition have interrelations of a causal nature. Facts when grouped support the inference.

Following the first great exposition in this country, the Philadelphia Centennial of 1876, more patents were issued than during the entire period from the establishment of the system down to that time. The record of applications received shows that the impulse of that event was not immediately perceived, but in the year 1880 and in every year after, the increase in applications filed has been marked.

It would seem that a great exposition, while in some sense the concrete result of the patent system, may be expected to emphasize the stimulus afforded to invention by the patent system, and that allowing for a period of reflection or for the maturing of inventive material, there may be expected to follow the World's Exposition a still greater activity in the field of invention than has hitherto been known.

APPENDIX.

SCIENTIFIC LIBRARY, *December 30, 1893.*

SIR: I have the honor to forward herewith a report upon the history, scope, and present condition of the Scientific Library of the Patent Office.

This library may be said to have been founded by the act of Congress of March 3, 1839, appropriating \$1,000 from the Patent fund for the purchase of "necessary books" for the use of the Patent Office. Though a collection of books had previously existed, yet, even if it could properly be called a library, it perished in the fire which destroyed the building in December, 1836.

For the first fifteen years the library had a slow, neglected, and ill-recorded growth. It was feebly nourished on uncertain appropriations, the first of which was counter-appropriated by the Office in its need of repairs from the fire. About 1852 the solid history of the library begins. A much more liberal appropriation was made, and a librarian was secured of such qualifications that prosperity of the library under him would be of necessity. The name of this great scholar and faithful worker, W. W. Turner, may be singly mentioned from his primary position in the history. The library now began to be one of record, and to acquire the great sets of foreign patents, and technical periodicals on an adequate scale, as well as other matter, which have given it the peculiar character ever since borne. All development of the library as a collection has been simply on the lines laid out by Turner and his immediate followers.

The Congressional appropriation, always fluctuating, lapsed after a time into mere contingency, and purchase was more or less precarious. In 1876 the library numbered 33,500 volumes, but in 1879 a regular annual appropriation was obtained of \$5,000 until 1886, then of about \$2,500 until the past two years, during which it has suffered a scaling of \$500 each year to its present figure, \$1,500.

During these eighteen years the size of the library has nearly doubled, its number at the present time being 64,680 volumes. There are in addition about 1,000 unbound volumes not yet placed upon the shelves. About half of its periodicals are obtained by exchange; Government publications, trade catalogues, and the proceedings of some of the learned societies, by gift. Being a Government library of course it has no hope of those bequests and munificent donations which have enriched so many collections. No librarian of the Departments need await, with faith and what patience he may command, the good man's end which shall bestow the gift of thousands on his shelves. The Government library is supposed to take care of itself; and it does, with difficulties of its own. The boar of the Appropriations Committee doth waste it, and the wild beast of the Office doth choke it into dark corners. The arm of the Government is over it—with a chastening rod, oftentimes.

Designed as a collection for reference in the examination for applications for patents, in order to determine the question of novelty of invention, it has grown mainly in the direction of technological publi-

cations, including full sets of the periodicals devoted to special industrial art and all the more important treatises on machines, arts, processes, and products in the English, French and German languages.

Prominent among such works it contains a series of English patents from their beginning in 1617 to date, comprising upward of 5,000 volumes of text and plates; a series of French patents numbering about 900 volumes; 800 of German, and complete sets of Victoria, Queensland, Canada, New Zealand, Italy, Switzerland, Sweden, Russia, Austria, Norway, Belgium and Sardinia, each containing less than one hundred volumes, the whole aggregating more than half a million of individual patents. It contains also 1,531 volumes of literature relating to patents, including indexes and abridgments of foreign patents; 1,300 volumes of bibliographical works; 3,000 law books; 500 United States publications not of a strictly technical character, and about 1,300 volumes of the important English and American reviews, the subscription to which has been, some time since, discontinued. The classes above mentioned, together with encyclopedias of every description, works on pure science, specific and general, and medical works of which few purchases are now made but of which a large number were retained when the copyright collection was removed in 1870—comprise in round numbers 26,500 volumes; leaving for publications devoted to special arts about 38,000, very nearly equally divided between books and periodicals.

The library at the present time is believed to be closely adhering to its original purpose and unquestionably is the best technical library in this country; while a high authority of one of our leading universities has publicly stated that it has no superior in the world. It is a useful resort for the study of the application of science to art in every department and in all kinds of practical or utilitarian investigation. It aims to embody as far as possible the literature of Human Industry.

The books are freely opened for consultation in the library hall to all persons; but the freedom of the shelves and the privilege of withdrawal for study are limited to employees in discharge of official duties. It is largely and increasingly used by inventors, attorneys and all interested in patent business, as well as by men in all the walks of science, and especially by other scientific departments of the Government, who do not attempt as a rule to duplicate in their own collections the resources of this library.

The catalogue of the library as it now exists was founded by W. E. Jillson, who was librarian from 1856 to 1865. It was made on cards according to the rules of Jewett, then librarian of the Smithsonian Institution and whose system, adopted from that of the British Museum, has never been essentially superseded, the later and more elaborate rules being rather developments than change of organic structure. Library cataloguing, it may be properly mentioned, is an art of such requirements that the pithiest digest of the rules would make a pamphlet about as large as that of the Patent Office. This catalogue was first printed in 1878, containing authors and subjects in one alphabet. Additions were also printed in 1882

and in 1888. This last catalogue, in the matter of accuracy, is much in advance of the previous additions, the copy and proof having been exclusively under the charge of Mr. Farquhar, the accomplished reference librarian.

The catalogue since 1888 exists as a card catalogue representing 9,330 volumes. Every book received in the library is at once catalogued and the cards of author, subject, and cross-reference, alphabetized in their cases. For eight years past the catalogue has been entirely in the hands of one person, who is thoroughly trained in the theory and the artificialities of the subject, and for this reason especially, would, I believe, be free from many errors and inconsistencies to be found in the first and second issues. An interleaved copy of the catalogue is kept in the reading-room in which the printed additions are pasted, so that all thus far published may be found in one general alphabetical list.

In my judgment no more supplementary catalogues should be printed, both on account of their decreasing usefulness as they multiply and the defects of the original which serves as a foundation of the later series; but as soon as a sufficient appropriation can be given the whole should be thoroughly revised and combined from the beginning.

A duplicate set of patents is now received from every country which exchanges its printed specifications with the United States, and these immediately on arrival are distributed to the several Examining Divisions controlling that subject-matter.

One of the first subjects to come under the notice of the present librarian was the binding work of the library. This was found to be in an extremely bad condition, far behind date and bearing evidence of loose and careless management. Much time was devoted to this branch of library economy which has been thoroughly systematized, until now nearly every periodical received can be sent to the bindery within a month after the reception of title-page and index, subject only to the limitation of the Public Printer to handle the material. The necessities of the library require the binding of at least 1,000 volumes a year, but we have seldom been able to obtain the performance of so much work, and through no fault of its own the library is at the present time more than 500 volumes behind.

For three years past all the time which could be spared from the general supervision of the library has been devoted by the librarian to special efforts to make its resources available in the highest degree to the Office and to the public. To this end three full sets of French patents of the third series beginning with 1860 were obtained, and of these two sets were arranged by sub-classes of inventions, from 1860 to 1885, inclusive, following the French classification. One of these sets has been assigned to the Examiners according to the subject-matter, the other retained on the shelves of the library, which now has two complete sets of French patents since 1860, the one chronological and the other by subjects, the latter greatly facilitating search and examination. Current issues of German and English patents are now received in triplicate, and arrangements have been made for a

triplicate copy of back issues, with the intent of providing classified sets similar to the French. The lack of money to pay for the transportation has compelled us thus far to forego the advantages to be derived from this plan, and, with the present accommodation of the library, room could not be found for them if completed.

My attention was called at an early date to the indexing work of the library. The plan in vogue had been to take up single periodicals and index them from the beginning. Under this system I found indexes to the *Scientific American*, *Telegraphic Journal*, and *London Engineer* nearly completed. These had been stowed away in drawers inaccessible for use, parts of them for many years, as the attempts made for printing had failed by reason of the expense. The work on these journals was done at different periods by many different indexers, and therefore lacked uniformity and required a large amount of revision. It was determined to make these cards available for use and they were sent to the Library Bureau, punched, and the drawers fitted with guard-rods. While the revision of this work was in progress I became impressed with the inutility of the method for the production of wide and tangible results, and the necessity of making available to the Office its immense collection of technical and scientific periodicals. This necessity is more apparent when it is pointed out that *Poole's Index of Periodicals* utterly ignores all technical journals, and its successor takes up less than ten. An *Index of Engineering Periodicals* covering however, only nineteen journals, has been published in Boston in series of five years each. Two journals, one in Chicago and one in London, are now publishing indexes covering only the subject of engineering, and there is no index in the English language that makes any pretensions to do for Science and Technics the work that the magnificent *Index Catalogue of the Surgeon-General's Office* has done for Medicine. Rieth's *Repertorium der Technischen Journal-Literatur*, published under the auspices of the German Patent Office, is the only one which covers this field, but this of course is printed in German and singularly enough almost entirely ignores pure chemistry.

As it was impossible to go back and take up all the periodical literature of the library from the beginning, it was determined to commence with January 1, 1891, and index, as far as possible, all the periodicals received in the library. Sufficient force could not be obtained to include the whole list, and the work was begun and has been carried on by seven clerks, most of whom have other duties in connection with the work of the library. With this force we are now indexing 208 journals in English and Continental languages; in the classes of electricity, engineering, chemistry and photography, all the journals excepting a portion of the German are covered by the indexers. Having only one German translator, we are obliged to make a selection from the German periodicals. In other departments the principal journals in all languages have been selected, very little being omitted which is printed in English.

It has been said "that system is best which most appropriately and completely corresponds to the special

peculiarities and real needs of the library." The conditions which prevail in this library, which was established and is maintained primarily for the use of the Examining Corps, seemed to demand a subject-index which would afford the greatest facility for consultation by the Office force, patent attorneys and inventors, who form the great bulk of seekers for information from our shelves. This consideration has not only led to the adoption of the classified feature, but the structure has been reared upon the foundation of the Patent Office classification of inventions; a system which has been a growth, not an invention, empirical and unscientific in many details, but in its broad features admirably adapted to the needs of its users, and the most minutely specialized scheme in existence.

The plan adopted is in general the same as that of Rieth's *Repertorium*—that is, the principal subjects arranged alphabetically with a certain amount of classification. Each large subject is under leading headings, and these are subdivided, the divisions being marked by guide-cards of different colors. In distinction from the *Repertorium*, however, the alphabetical arrangement is repeated in each division and sub-division, a plan first used in Mr. Ezra Abbot's card catalogue of Harvard College library. In the ultimate subdivision, the cards are arranged alphabetically by authors, or by the principal word in anonymous articles. Each card contains the name of author, full title of the article, abbreviated title of the journal, and number of the year, volume and page. There will also be a cross-reference card to each division and subdivision placed in its proper alphabetical order, as a guide to all subjects which by the classification are removed from their natural place in the alphabet. For the principal headings zinc guides are used, for the first division a blue card with projection on the outer third, for the second a buff card with center projection, and for cross-references a white card with center projection. The cases are of the standard form furnished by the Library Bureau.

As there is very little prospect of the printing of this index, at least for a long time to come, all preparations have been made with a view to carrying it on as a card index open to the force of the Office and such of the general public as visit the library.

The duty of reviewing the periodicals and selecting the articles to be indexed falls wholly upon the librarian, and this, with the general work of the library, has so pressed upon the time necessary for completing the classification of the cards, that the date of opening the index to the public has been delayed much longer than was expected. The end is, however, now in sight, and I trust that within a few months this index which now comprises about 100,000 cards will be thrown open to the public, and will be found to greatly facilitate the search of the Examiners and other users of the library. As soon as this index is opened it is proposed to consolidate the cards of the three individual indexes before mentioned into one alphabet, and to change them from the present alphabetical arrangement to a classification following the same general system as that adopted in the current index. These are typical journals in the field covered by each, and through

them may be traced, in the *Scientific American*, the progress of general science since 1846; that of engineering since 1856 in the *Engineer*, and of electricity since 1873 in the *Telegraphic Journal*.

A resolution recently introduced by Senator McMillan has been referred to the Committee on the Library, providing that duplicates of copyrighted works on scientific and technical subjects may be distributed by the Librarian of Congress among the several Governmental libraries situated in Washington, with the privilege of recall whenever the original copy may be lost or defaced. This resolution, if enacted into law, would make a large saving in the expenditures for current American books, our only competitors being the library of the Engineer Corps and that of the Geological Survey. This resolution has been referred for report to Mr. Spofford, the Librarian of Congress, and his recommendation will doubtless be followed. He has asked librarians for an expression of views upon the subject, and our claims and the advantages which would accrue to us will be presented to him at an early day.

It is hardly necessary for me to call your attention to the needs of the library for money and space. Three years ago I said "the library has already passed the limit of its capacity, and devices of various degrees of demerit must be resorted to in making provision for the increasing store of books. This straitness is felt most severely in the foreign patent room, which crossed the danger line nearly a year [four years] ago. By putting the equivalent of a mansard roof upon eight cases, space has been obtained for the foreign patents for five years, this, however, at the expense of convenience in handling, a ladder now being necessary for high shelves."

As for the financial need of the library, I am sure that nothing said by me can add to the interest or solicitude which you have already expressed on this subject, or to the earnestness with which you are laboring for improved conditions. I will therefore only call your attention to the report lately furnished at your request, showing in addition to the necessity for an increased appropriation for the purchase of current books, the need of an expenditure of nearly \$10,000 to fill up broken sets of publications and to complete our stock of references on certain lines of invention. When the Surgeon-General's library can get \$7,000 for books and \$11,000 for printing and binding, it would seem, without detracting from the magnificent service which that library is rendering to medical bibliography, that more than \$1,500 might well be spared for the equally necessary work which this Office renders to the cause of invention.

This library, above all others, exists not for the dim future but for the living present. It is an armory whose every weapon is ready to battle against error and prejudice; a workshop whose tools are always sharp and whose anvils ring with sturdy blows for the uplifting of labor and the spread of prosperity through all the land; a storehouse filled with the garnered wealth of all ages, where every one, rich or poor, the wayfarer and the stranger, who hungereth and thirsteth for knowledge, may come and be filled.

The outlays for the fiscal year ending June 30, 1893, have been thus divided:

Appropriation	\$2,500.00
Books, law and technical	\$1,181.58
Periodicals and foreign serials	853.27
Transportation	465.15
	<u>2,500.00</u>

The employees under my charge have, with rare exceptions, rendered intelligent and earnest service during the year, many of the most faithful and deserving among them receiving salaries far below the merit of their work, and less than are paid for the same grade of talent in other Departments.

I append herewith a statement of the work per-

formed in the scientific library during the calendar year 1893:

Volumes sent to the bindery	1,000
Volumes collated and catalogued	1,598
Number of journals indexed	4,120
Number of articles indexed	27,371
Translations, miscellaneous	143
Number of words in patents translated	65,400
Letters received	373
Letters written	376
Circulars sent	624

Very respectfully,

HOWARD L. PRINCE,
Librarian.

Hon. J. S. SEYMOUR,
Commissioner of Patents.
